

YASIR OYEBO OLADIMEJI

Backend Software Engineer

Lagos, Nigeria • +234 906 891 3009 • yasiroyebo@gmail.com
yastec.vercel.app • github.com/YastecHub • linkedin.com/in/yasir-oyebo0

PROFESSIONAL SUMMARY

Backend Software Engineer specializing in event-driven microservices, distributed caching (Redis), Kafka event streaming, LLM API integration, and SQL performance optimization across fintech, e-commerce, and AI domains. Delivered production systems processing 10,000+ daily transactions using Clean Architecture, CQRS, DDD, and fault-tolerant microservice patterns.

TECHNICAL SKILLS

- **Languages:** C#, TypeScript, JavaScript, Python, SQL
- **Backend Frameworks:** ASP.NET Core (.NET 6/8/10), NestJS, Express.js, FastAPI; Dependency Injection, Middleware Pipelines, Background Services
- **Messaging & Caching:** Apache Kafka (event streaming, async decoupling), Redis (cache invalidation, TTL strategies), Message Queues, Microservices
- **Architecture & Patterns:** Clean Architecture, Domain-Driven Design (DDD), CQRS, MediatR, Repository Pattern, Unit of Work, Vertical Slice, SOLID, API Versioning
- **Databases & Performance:** SQL Server, PostgreSQL, MongoDB, EF Core, LINQ, DB Indexing & Query-Plan Optimization, ACID Transactions
- **AI, DevOps & Observability:** LLM API Integration (GroqAI, YarnGPT), Docker, Azure, CI/CD, Serilog, xUnit, Swagger/OpenAPI, JWT, OAuth2, RBAC

PROFESSIONAL EXPERIENCE

Software Engineer

Whitteintel Limited

Jan 2026 – Present

Lagos, Nigeria

- Architected **WhitteIntelCoop**, a versioned (v1/v2) ASP.NET Core API applying **CQRS + MediatR** to decouple read and write workloads, reducing query latency under write-heavy load.
- Implemented **role-based access control (RBAC)** with JWT and layered middleware, enforcing fine-grained authorization across all API surfaces with EF Core Unit of Work for transactional integrity.
- Established an **xUnit test strategy** (unit + integration) covering critical paths; containerized with Docker Compose and introduced **Serilog** request-tracing for production observability.

Full Stack Engineer

Codefactory Innovative Hub (Contract)

Jun 2025 – Dec 2025

Lagos, Nigeria

- Engineered a production **Wallet-as-a-Service (WaaS)** platform on ASP.NET Core + Clean Architecture, delivering 15+ RESTful endpoints for wallet creation, KYC, balance management, and transaction history.
- **Extracted the wallet ledger into an independent microservice**, streaming transaction events via **Apache Kafka** to decouple ledger writes from WaaS core and enable independent scaling.
- Achieved **45% reduction in p95 API response times** through targeted **DB index design, query-plan analysis, and covering-index strategies** on SQL Server hot paths across WaaS and GrowthGIA.
- Launched **GrowthGIA to production** with 25+ REST APIs across Commerce, Identity, and Logistics; integrated **Redis caching** to cut database read load by ~60% at peak volume.

.NET Backend Developer

Teknikforce (Contract)

Jan 2025 – May 2025

Delhi, India

- Modernized enterprise SaaS backend through a **.NET 6 → .NET 8 migration**, rebuilding JWT authentication, RBAC, and secure cookies with zero-downtime deployment across 5+ client projects.
- Shipped secure RESTful APIs in a hybrid .NET/Node.js architecture with structured validation and global exception-handling middleware, reducing production incidents by **30%** across cross-timezone engineering teams.

Backend Developer (Intern)

HNG Tech

Feb 2024 – Mar 2024

Lagos, Nigeria

- Integrated **GroqAI LLM API** into Telex (telex.im) with retry logic, exponential backoff, and circuit-breaker patterns, cutting endpoint error rates by **40%** under high-concurrency load.
- Advanced to the **Finalist Stage of the HNG Backend Track** within a 7-developer Agile team, placing in the top percentile of program participants using Clean Architecture.

FEATURED PROJECTS

GrowthGIA API: Production E-Commerce Platform

.NET 10, PostgreSQL, Redis, DDD, Vertical Slice Architecture

- Structured a modular monolith across three domain contexts (Commerce, Identity, Logistics), enforcing ACID transactions and context isolation via automated architecture fitness tests.
- Layered **Redis TTL-based cache invalidation** on product catalog and pricing endpoints, cutting database round-trips by ~60% at peak traffic and improving P99 latency.

WAAS: Wallet as a Service

C#, .NET 8, Apache Kafka, EF Core, SQL Server, Clean Architecture

- Implemented **Unit of Work + Kafka event streaming** in the production ledger microservice, guaranteeing auditable, at-least-once processing for **10,000+ daily transactions**.
- Crafted **idempotent Kafka consumers** to prevent duplicate-credit/debit on message replay, ensuring financial data consistency under network failures and broker restarts.

AWARDS & RECOGNITION

HostelSync AI: Predictive Hostel Allocation Platform

1st Place | UNILAG Hackathon

- Built a two-stage AI allocation engine (Housing Vulnerability Index + spatial optimization) processing **3,000+ applications in 0.34 seconds**, achieving a 16× lift in bed-assignment rates for the lowest-income students.

Sentra: AI Healthcare & Accessibility Platform

3rd Place | TOS Hub Hackathon

- Built an LLM-powered healthcare backend unifying **symptom analysis, voice-to-diagnosis, OCR, and obstacle detection** across 10+ Swagger-documented REST endpoints in a TypeScript (NestJS) service.

EDUCATION

Doctor of Pharmacy (PharmD) • University of Lagos

Lagos, Nigeria
